Eurooppalainen tekninen hyväksyntäorganisaatio
European Organisation for Technical Approvals
I LEGAL BASES AND GENERAL CONDITIONS

1. This European Technical Approval is issued by the VTT Expert Services Ltd in accordance with:

     administrative provisions of Member States relating to construction products¹, modified by the
     Parliament and of the Council³;

   - Laki rakennustuotteiden hyväksynnästä (230/2003) luvut 3 ja 10, Ympäristöministeriön asetus
     rakennustuotteiden hyväksynnästä 3 § sekä Ympäristöministeriön 18.12.2009 antama
     valtuutuspäätös (19/629/2009).

   - Common Procedural Rules for Requesting, Preparing and the Granting of European Technical
     Approvals set out in the Annex of Commission Decision 94/23/EC⁴;

   - Guideline for European Technical Approval of Internal partition kits for use as non-load

2. The VTT Expert Services Ltd is authorised to check whether the provisions of this European
   Technical Approval are met. Checking may take place in the manufacturing plant (for example
   concerning the fulfilment of assumptions made in this European Technical Approval with regard
   to manufacturing). Nevertheless, the responsibility for the conformity of the products with the
   European Technical Approval and for their fitness for the intended use remains with the holder
   of the European Technical Approval.

3. This European Technical Approval is not to be transferred to manufacturers or agents of
   manufacturer other than those indicated on page 1; or manufacturing plants other than those
   indicated on page 1 of this European Technical Approval.

4. This European Technical Approval may be withdrawn by the VTT Expert Services Ltd (pursuant

5. Reproduction of this European Technical Approval including transmission by electronic means
   shall be in full. However, partial reproduction can be made with the written consent of VTT
   Expert Services Ltd. In this case partial reproduction has to be designated as such. Texts and
   drawings of advertising brochures shall not contradict or misuse the European Technical
   Approval.

6. The European Technical Approval is issued by VTT Expert Services Ltd in English. This version
   corresponds to the version circulated within EOTA. Translations into other languages have to
   be designated as such.

---

² Official Journal of the European Communities N° L 220, 30.8.1993, p. 1
³ Official Journal of the European union N° L 284, 31.10.2003, p. 25
II  SPECIFIC CONDITIONS OF THE EUROPEAN TECHNICAL APPROVAL

1. Definition of the product and intended use

The Paroc partition kit comprises galvanized steel or timber studs one, two or three layer plasterboard surfaces on both sides and thermal insulation inside the walls. The plasterboards are fastened onto steel or timber studs with defined fastenings. The tightening of the joints of the partitions is made by gypsum plaster.

The tightening between the partition and ceiling and floor is done on site according to the installation instructions of the manufacturer, for example Knauf, either with acrylic sealant (acoustic walls) or with mineral wool of reaction to fire class A1 or with non combustible sealant. Sealing products are not part of this ETA. The tightening of possible gaps like electrical installations shall be done to secure the air tightness of the gap and in case of fire walls also with non combustible materials.

The distance between the studs is 600 mm. The cross section dimensions of the steel studs is 66–70 mm or 95 mm and timber studs 70 mm. The steel studs are made of 0,56 mm thick galvanized cold rolled steel according to the standards EN 10142 and EN 10147 with zinc coating 275 g/ m². The timber studs are spruce.

The thickness of the plasterboard is 12,5 mm. The plasterboards fulfil the criteria of the standard EN 520 and have the properties presented in paragraph 2 and appendix 1 of this ETA. The maximum height of the walls and gypsum boards is 3 m. The width of the gypsum boards is 1200 mm.

The insulation of the walls is stone wool which fulfils the criteria of standard EN 13162 and has a fire class A1 and designation code MW-EN 13162-T4-DS(T+)-WS-WL(P)-MU1 or MW-EN 13162-T2-DS(T+)-WS-WL(P)-MU1 and which fulfils the criteria presented in Appendix 1 of this ETA.

The different types of the partition kits are presented in the Appendix 2.

The Paroc partition kits are intended to be used as non load bearing partitions in dry spaces especially where the partitions have fire resistance and/or sound insulation requirements.

The partition kit is fastened to the load bearing structure with air tight sealing and according to the designers or gypsum board suppliers, for example Knauf, instructions. The fastening devices are not part of this ETA.

The provisions made in this ETA are based on an assumed intended working life for a partition kit of 25 years provided that the kit is subjected to appropriate use and maintenance. The indications given on the working life cannot be interpreted as a guarantee given by the producer or the approval body, but are to be used as a means for selecting the appropriate product in relation to the expected economically reasonable working life of the works.
2. Characteristics of product and assessment

*In addition of the specific clauses relating to dangerous substances contained in this European Technical Approval, there may be other requirements applicable to the products falling within its scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the Construction Products directive, these requirements need also to be compiled with, when and where they apply.

* Note: Fibre lengths and diameters of the mineral wool according to the EUCER rules.
3. Evaluation of conformity and CE marking

3.1 Attestation of conformity system

The attestation of conformity applied to this product specified by the European Commission in Mandate Construct 97/243 REV.1, Annex 3 is system 3, since there is no improvement of the reaction to fire classification in the production process.

3.2 Tasks for the manufacturer

3.2.1 Factory production control

The manufacturer continues to operate a factory production control system. Quality control checks are made on incoming materials, and at regular stages throughout the production sequence to ensure the quality and fitness for use of the components.

Mineral wools are CE-marked and controlled by the manufacturer and notified body.

The quality control of the other partition components includes checking of:

- Dimensions (plasterboard, Profiles)
- Material quality (incoming materials data sheets)
- Square weight of the gypsum boards and paper used on it
- Amount of zinc (profiles)

VTT Expert Services Ltd maintains a file describing the tasks and tests imposed on ETA holder and the component manufacturers by the approval holder.

The file includes information of the main components of the kit, i.e. plaster boards, insulation material, steel and timber studs, and fixings. The file include also the control plan which include the type and frequency of the control agreed between VTT Expert Services Ltd and approval holder.

3.2.3 Initial type testing of the product

For initial type testing the results of the tests performed as part of the assessment for this European Technical Approval shall be used unless there are changes in the production line or plant. In such cases the necessary type testing has to be agreed between VTT Expert Services Ltd and the approval holder.

3.3 CE-marking

The CE-marking shall be affixed to each delivery of partition kit and accompanying commercial documents.

The symbol “CE” shall be accompanied by the following information:

- Name of the product: Commercial trade name as indicated in this ETA
- Name of the ETA holder and manufacturer(s) (both/all if they are separate)
- The last two digits of the year in which the CE marking was affixed
- Number of the European Technical Approval
4. Assumptions under which the fitness of the product for the intended use was favourably assessed

4.1 Manufacturing

All materials of the partition kits belonging into the ETA shall be in accordance with the provisions laid down in the European Technical Approval. All materials used in the partitions shall fulfil the criteria given in this ETA.

4.2 Installation and design rules

4.2.1 Design rules

The partition kits are installed into indoor spaces with normal indoor temperature and moisture conditions.

4.2.2 Installation

The partition kit will be installed according to the separate installation instructions of the ETA holder “How to work with Paroc stone wool, dated on March 2006 and “Installation Guideline for Paroc partitions”. Dated on May 2007. It is important that all contractors are educated and trained how the walls shall be erected and installed and in which cases and how the gaps to the walls can be made without affecting the intended performance of the wall.

4.3 Maintenance and repair

The assessment of the fitness for use is based on the assumption that abrasion and minor impact damage are inevitable and shall be easy to repair. In case of damage, repair can be made with gypsum based mortar or levelling.
